

Anterior Tilt

The REAC anterior tilt system is used for changing tilt angle in both directions (forwards and backwards). The system has also an additional lifting function. By applying both tilt functions at the same time, the seat is lifted vertically 202mm.

The REAC anterior tilt is based on a unique mechanism designed for powered wheelchairs and other rehab industry devices. It combines the functionality of a typical tilt system with a forward tilt system, making it easier for the user to get out of the seat.

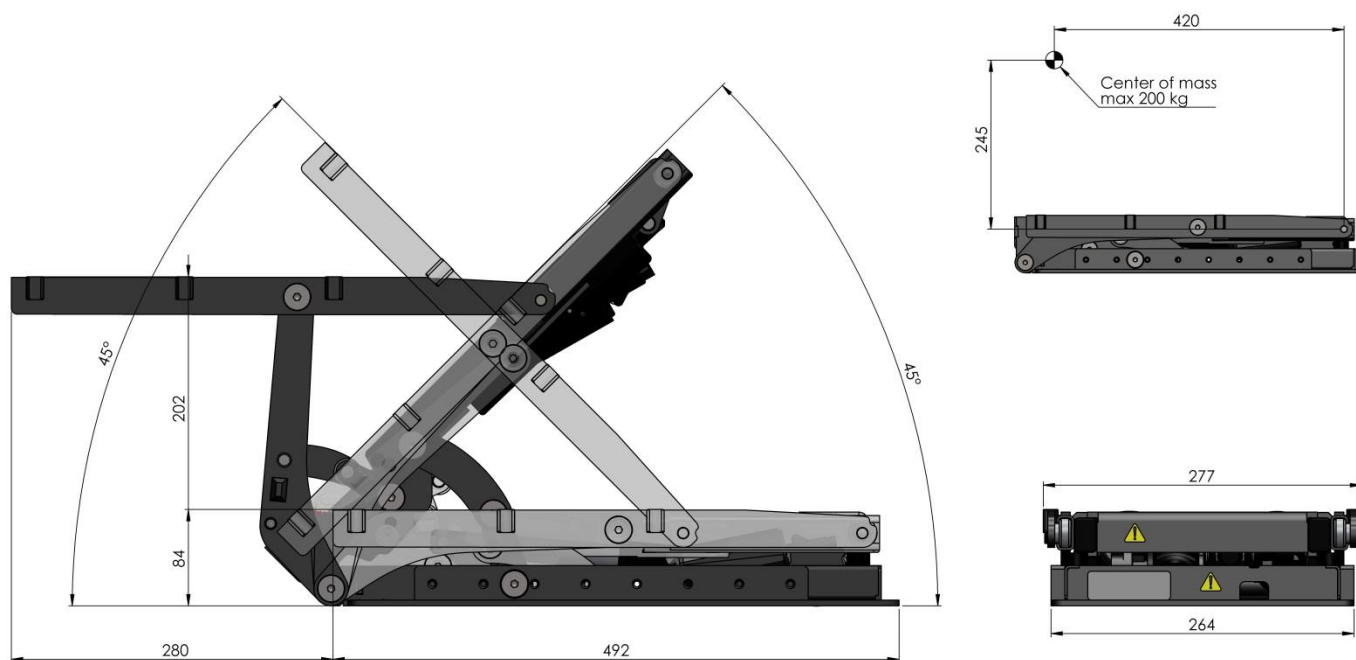

The system has an exceptionally robust construction, giving the flexibility to place seat more forward than in other comparable systems. It is possible to modify the upper and lower frames independently, so that they can have different dimensions depending on customer needs.

Standard features

Load capacity	200kg
Lifting height	202 mm
Min install height	84 mm
Install width	263,5 mm
Install length	510 mm
Max tilting/ anterior angel	45°/45°
Weight	17kg
Lifting speed	4 – 10mm/s
Tilting speed	0,9 – 2,4 °/s
Motor	24VDC
Protection class	IP41

The system can be adjusted according to different needs and applications. Therefore the data in the table above are indicative. We are happy to offer you a system according to your specification.
